

Information Security Awareness Course: Oil & Gas Industry

An Interactive E-Learning Course for End Users.

“ Organisations that are critical to the economy of a nation are primary targets of Cybercrime. Oil & Gas entities are amongst the top in the list. ”

When it comes to Cybersecurity Awareness training, one size does not fit all. Hence, Security Quotient has crafted this exclusive course for the workforce in the Oil, Gas & Energy industry. While the essential systems and communication channels like email are ubiquitous across most industries, the nature of data, the technology and the systems used by the Oil & Gas industry are different. So, is the economic importance of the entity from a nation's perspective.

Course overview

Businesses operating in the Oil & Gas segment are prime targets for Cybercriminals considering their importance for the economy of the nation. Having employees with knowledge and skills to tackle Information Security risks becomes a critical requirement of the Oil & Gas industry.

The course delves deep into Cybercrime that has affected the Oil & Gas industry in recent years. This is followed by Cyberattacks and malware specific to the industry. The learner then proceeds to learn Cybersecurity best practices through multiple realistic interactive risk scenarios to understand and solve Information Security risks.

The E-Learning course ends with a mandatory 10 question assessment that the learner must score a minimum of 80% to pass. Learners who fail will be guided to retake the assessment.
