Information Security Awareness Course

C-level Executives and Senior Management

An Interactive E-Learning Course for Leaders.

"**Cybersecurity is a boardroom initiative.**"

Strong boardroom leadership with a deep understanding of the business context of Cybersecurity is an asset for a successful organisation.

This course respects the time of leaders. The focus is on providing essential knowledge precisely and succinctly. Unlike an end user Cybersecurity awareness course, more time is devoted to real business Cybercrime case studies followed by quality inputs on Cybersecurity Leadership practices.

Course overview

A Cyberattack can destroy the assets and reputation of an organisation in a few hours. Any negligence on Cybersecurity affects the business in terms of customer trust, reputation, money and invites regulatory scrutiny.

Therefore, without a doubt, Cybersecurity is a boardroom issue. It must be considered akin to any important business initiative that deserves quality time, attention and dedication of Leaders.

The course begins with real case studies about the latest Cybercrime and its impact on the business. This is followed by inputs on Cybersecurity Leadership practices that C-Level Executives must aim to cultivate.
